PROFESSIONAL SUMMARY

Full-stack software engineer who builds and ships production systems end-to-end — architecture, backend, frontend, and deployment. Comfortable across React and TypeScript on the frontend and Python (Django, Flask, FastAPI) and Node.js/NestJS on the backend, with PostgreSQL, MySQL, Supabase, and Redis. Recent work includes a live e-commerce platform serving 200+ customers built solo from first commit to production, a multi-portal healthcare system with 60+ REST endpoints and role-based access across 40+ granular permissions, and an AI diagnostic tool built as sole founder where a trained model is served through a production API. Strong on the parts that matter after launch: debugging production issues from evidence, hardening systems against real failure modes, and writing code that stays maintainable. Equally comfortable owning a build alone or working within an existing codebase and established patterns.

TECHNICAL SKILLS

Frontend: React.js · Next.js · TypeScript · JavaScript (ES6+) · HTML5 · CSS3 · Tailwind CSS · Material UI · React Native (Expo) · Responsive design · Reusable component & design-system architecture

Backend: Python (Django, Django REST Framework, Flask, FastAPI) · Node.js · NestJS · RESTful API design · Authentication & authorization (JWT, RBAC) · Webhook handling & signature verification

Databases: PostgreSQL · MySQL · Supabase · Redis (caching) · Schema design & data modelling

Infrastructure & DevOps: Docker · CI/CD (GitHub Actions) · Git & PR-based code review · Vercel · Render · Azure

Quality & Testing: Jest · Pytest · Production debugging & root-cause diagnosis · Performance optimisation · Technical documentation

AI & ML: TensorFlow/Keras · Model training & evaluation · Serving models through production APIs · Pandas, NumPy · AI-assisted development (Claude Code — Anthropic-certified, ChatGPT, Gemini)

Also: Java · SQL · Agile/Scrum · Figma · Notion · Linear · Slack

EXPERIENCE

Founder · TB Detect AI

Oct 2025 – Present

Lagos, Nigeria (Remote) — Early-Stage AI Health Technology Startup

- Built an AI-powered tuberculosis screening tool end-to-end as sole founder: a trained TensorFlow/Keras model served through a Flask REST API to a live React application, with confidence scoring and automated PDF report generation.
- Diagnosed that weak real-world performance stemmed from unrepresentative training data rather than the model architecture, then fine-tuned on a locally-sourced clinical dataset — improving detection on the target population from 1-in-5 to 4-in-5 cases (97.95% accuracy, 0.9986 AUC on a held-out test set).
- Integrated Grad-CAM explainability so clinicians can verify model decisions against the source imaging; independently validated by a practising radiologist.

Front-End Software Engineer (Intern) · ISurf Global Services

Jul 2025 – Sep 2025

Lagos, Nigeria

- Delivered core modules of a production HRMS used by 30+ companies — Payroll, Training & Certification, and Time & Attendance — translating Figma designs into production-ready React components within an existing codebase.
- Integrated frontend features with REST APIs to power end-to-end workflows, and implemented RBAC-driven UI patterns restricting sensitive HR and financial data to authorised users.
- Diagnosed and resolved cross-browser issues, improving reliability across the client base.

Software Engineering Intern · Cyber Fleet

Jul 2024 – Sep 2024

Remote — 3-Person Engineering Team

- Built and shipped web and mobile features using JavaScript, Node.js, and React Native, contributing to a 25% improvement in user engagement metrics.
- Collaborated on deploying a secure cloud-hosted system, practising async standups, PR-based code review, and documented decision-making on a fully remote team.

Co-founder & Operations Lead · DTSLUXE

Apr 2025 – Present

Lagos, Nigeria — E-Commerce Brand

- Built and ran a premium e-commerce brand to 100+ customers and ₦5M+ in revenue, designing and building the Shopify storefront end-to-end and owning product structure, customer experience, and fulfilment workflows.

SELECTED PROJECTS

Nonye's Pasta — Full-Stack E-Commerce & Ordering Platform

Jul 2026 – Present

React (Vite) · Tailwind CSS · Django 6 + DRF · PostgreSQL · Paystack · Cloudinary · Telegram Bot API

- Designed, built, and deployed a live platform solo, now serving 200+ customers — architecture through production deployment, live payments, and real-time order notifications.
- Hardened the order flow against real failure modes: no order is persisted until the payment webhook cryptographically confirms it (HMAC-SHA512 signature verification), pricing is computed server-side across 60+ delivery zones so amounts can't be tampered with client-side, and notification failures degrade gracefully rather than breaking checkout.
- Optimised performance end-to-end: compressed a hero video by 94% (16MB to ~950KB), added CDN-optimised and lazy-loaded images, and built client-side retry logic with backoff to handle backend cold starts.

City Care — Healthcare Management System

Dec 2025 – Present

TypeScript · React · NestJS · PostgreSQL · GitHub Actions

- Shipped 60+ RESTful API endpoints with pagination, validation, and structured response formats, integrated with a data-heavy multi-portal React frontend.
- Implemented JWT authentication and role-based access control across 40+ granular permissions, plus a reusable component library and design system, and built CI/CD pipelines with GitHub Actions.

Movein Rentals — Real Estate Listings Platform

Jul 2026

React · TypeScript · Supabase · FastAPI · PostgreSQL · Redis

- Built a full-stack listings platform with Redis caching for property listings and search results to reduce repeated database load.

Shift Management System — Biometric Attendance & Scheduling

2025

Java (Swing) · MySQL · JavaMail API

- Built a desktop application solo with biometric attendance tracking, CSV roster upload with automatic shift assignment, supervisor approval workflows, and automated email notifications.

EDUCATION

Bachelor of Science, Computer Science

Pan-Atlantic University, Lagos

Coursework: Data Structures & Algorithms · Software Engineering · Deep Learning · Data Science · Operating Systems · Object-Oriented Programming · Compiler Construction · HCI

AVAILABILITY

Based in Lagos, Nigeria (GMT+1), available immediately for full-time remote or hybrid work. Comfortable working independently with minimal supervision, collaborating across product, design, and engineering, and communicating clearly on progress, blockers, and trade-offs.
